## CONSTRAINED FIT INFORMATION

An overall fit to 4 branching ratios uses 5 measurements and one constraint to determine 5 parameters. The overall fit has a  $\chi^2 = 1.0$  for 1 degrees of freedom.

The following *off-diagonal* array elements are the correlation coefficients  $\langle \delta x_i \delta x_j \rangle / (\delta x_i \delta x_j)$ , in percent, from the fit to the branching fractions,  $x_i \equiv \Gamma_i / \Gamma_{\text{total}}$ . The fit constrains the  $x_i$  whose labels appear in this array to sum to one.

$x_2$	-6			
$x_3$	-8	0		
$x_4$	-99	0	-1	
$x_5$	-5	0	0	0
		$x_1$	$x_2$	$x_3$
			$x_4$	

## $\Xi^-$ BRANCHING RATIOS

A number of early results have been omitted.

-0.253 ± 0.028	2781	DAUBER	69 HBC	

<sup>8</sup> This LUK 00 value is for  $\alpha(\Xi^+) \alpha_+(\bar{\Lambda})$ . We assume  $CP$  conservation here by including it in the average for  $\alpha(\Xi^-) \alpha_-(\Lambda)$ . But see the second data block below for the  $CP$  test.

### $\alpha$ FOR $\Xi^- \rightarrow \Lambda \pi^-$

The above average,  $\alpha(\Xi^-) \alpha_-(\Lambda) = -0.294 \pm 0.005$ , where the error includes a scale factor of 1.7, divided by our current average  $\alpha_-(\Lambda) = 0.642 \pm 0.013$ , gives the following value for  $\alpha(\Xi^-)$ .

VALUE DOCUMENT ID  
**-0.458±0.012 OUR EVALUATION** Error includes scale factor of 1.8.

$$\frac{[\alpha(\Xi^-) \alpha_-(\Lambda) - \alpha(\Xi^+) \alpha_+(\bar{\Lambda})]}{[\alpha(\Xi^-) \alpha_-(\Lambda) + \alpha(\Xi^+) \alpha_+(\bar{\Lambda})]}$$

This is zero if  $CP$  is conserved. The  $\alpha$ 's are the decay-asymmetry parameters for  $\Xi^- \rightarrow \Lambda \pi^-$  and  $\Lambda \rightarrow p \pi^-$  and for  $\Xi^+ \rightarrow \bar{\Lambda} \pi^+$  and  $\bar{\Lambda} \rightarrow \bar{p} \pi^+$ .
